Objective

I'm seeking a part-time/contract developer role where I can make an impact with my technical and design skills. Ideally, my next role would allow me to continue honing my software skills while pursuing education for architecture technology.

Skills and Qualifications

- Experienced and familiar with several software platforms and frameworks, having worked for four years in front-end roles (*React, Ember*), plus two years in a full-stack role (*Java, J2EE, Oracle 11G*).
- Proficient at solving UI/UX problems, implementing design specs, and ensuring smooth user interaction in applications. Comes from a visual arts background and tends to work well with designers and UI/UX professionals.
- Accustomed to the agile workflow, and is a strong advocate for automated tests, continuous integration, and robust technical documentation.

Technical Experience and Education

Software Engineer // Uncharted Software

Nov 2019 – April 2021 | Toronto, ON

Uncharted Software is proud of solving tough problems visually, and they've built products for finance, law enforcement, and other industries. Here, I worked on the UI for an inference engine that helps teams make better decisions in extremely complex situations. Our portion of the project was built around Ember.JS, and interfaces with a data corpus collected through machine learning.

Responsibilities & Achievements

- Focused on improving the efficiency and usability of the UI
- Built out development roadmaps for implementing UI designs
- Integrated and maintained modules built by computer scientists and researchers

UI Web Developer // Intelix Technologies

Jun 2017 – Feb 2019 | Toronto, ON

Intelix caters to the *Environment, Health, Safety, and Quality* industry, and helps professionals keep workplaces around the world safe and sustainable. I mainly worked on the *EHSQ Alliance*, a social network that fosters collaboration and knowledge-sharing among EHSQ professionals. The project was built with ReactJS, and is integrated with the main Intelix application.

Responsibilities & Achievements

- Developed and maintained a new UI for an older application. As our codebase grew, I focused more on maintaining clean architecture and testing standards.
- Was part of a front-end architecture group that monitored our web app to find areas of improvement. These recommendations allowed multiple dev teams to tackle issues efficiently.

Technical Developer // Jonah Group

Sep 2014 – Nov 2016 | Toronto, ON

I worked on a J2EE application for *RouteOne*, an auto financing company which helps car dealers streamline credit applications for buying/leasing vehicles. Their system connected 18,000+ dealerships with 1,400+ finance sources. During my time on the project, RouteOne made efforts to improve their digital marketing platform. As part of this effort, I helped build a smoother credit application process for our users.

Responsibilities & Achievements

- Delivered customized features for our client, even under tight deadlines. In one case, I delivered a feature that normally took two months in just three weeks.
- Ensured that pages conformed to visual specs. Implemented responsive designs to make pages usable on multiple devices and browsers.

Ontario College Diploma // Humber College

Computer Programmer

September 2012 – April 2014 | Toronto, ON

Through two years of classes and school projects at Humber, I learned the fundamental principles of software engineering and how to work well in a team. My classes emphasized object-oriented programming in Java, along with HTML/CSS/Javascript, Oracle 11g, and a bit of Git.

About Me

When I'm away from work, I'm usually playing music or climbing at a gym. I'm currently working on building up my repertoire on guitar and performing music again.
